DETAILED ACTION

Claims 1-18 are currently pending in the instant application and are subject to the following new lack of unity requirement.

Election/Restrictions

Restriction is required under 35 U.S.C. 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Claims 1-18 are drawn to more than one inventive concept (as defined in PCT Rule 13), and accordingly, a restriction is required according to the provision of PCT Rule 13.2

PCT Rule 13.2 states that the international application shall relate to one invention only or to a group of inventions so linked as to form a general inventive concept (requirement of unity of invention).

PCT Rule 13.2 states that unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features.

Due to the numerous and widely divergent variables in the compound of formula (I), for example R1, R2, A, etc., a precise listing of inventive groups cannot be made. The following groups are exemplary:

Group I: Claims 1-17 drawn to products of formula (I) wherein R1 contains a cyclopentyl group as shown in claim 7, page 146, line 24, A is an aminophenyl group, and R2 is a carbamate.

Art Unit: 1626

Group II: Claims 1-17 drawn to products of formula (I) wherein R1 contains a morpholine group as shown in claim 11, page 151, line 15, A is an aminophenyl group, and R2 is an ester.

Group III: Claims 1-17 drawn to products of formula (I) wherein R1 contains a piperidine group as shown in claim 11, page 151, line 17, A is an aminophenyl group, and R2 is an ester.

Group IV: Claim 18 is drawn to a method of treating cancer by administering to a subject in need of treatment a compound of formula (I) according to claim 1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Again, this list is not exhaustive as it would be impossible under the time constraints due to the sheer volume of subject matter instantly claimed. Therefore, applicant may choose to elect a single invention (a product or a method of use of said product) by identifying another specific embodiment, i.e. another value for R1 and R2, not listed in the exemplary groups of the invention and examiner will endeavor to group the same.

The claims herein lack unity of invention under PCT rule 13.1 and 13.2 since, under 37 CFR 1.475(a) the compounds defined in the claims lack a significant structural element qualifying as the special technical feature that defines a contribution over the prior art. The technical feature of the instant claim(s) is the benzimidazole group, which does not define a contribution over the prior art (as can be seen by US Patent No. 6,393,125, which discloses the compound, 4-fluoro-benzenesulfonic acid-2-[(methoxycarbonyl)amino]-1h-benzimidazol-5-yl ester, CAS RN 90509-02-7, which corresponds to applicants formula (I) wherein R1 is aryl, A is

aminophenyl and R2 is ester). The variables on the benzimidazole group vary extensively and when taken as a whole result in vastly different compounds.

Accordingly, unity of invention is considered to be lacking and restriction of the invention in accordance with the rules of unity of invention is considered to be proper. Additionally, the vastness of the claimed subject matter, and the complications in understanding the claimed subject matter imposes a serious burden on any examination of the claimed subject matter.

The claims directed to method of use will be examined along with the elected invention as long as it is commensurate in scope therewith.
